# Car park barriers

Kaba Gallenschutz' car park barriers incorporate proven and robust components which provide a lifetime of trouble free operation and minimum maintenance. In addition, the drive unit offers optimum protection against vandalism. A microprocessor logic with running time monitoring enables all necessary control functions.

Together with Kaba card reader stands, the barrier programme offers customers high value solutions for the use of parking spaces and the protection of site roads and driveways.

Maximum flexibility of control is available in conjunction with card readers, remote control devices and manual control via the car park attendant. For example, different areas of a car park can be administered separately for the use of customers, visitors and employees with restrictions for use including evening and night time operations. Flexible fee systems can also be incorporated.

#### **Car park barriers**

- very short opening time
- attractive, painted housing (optional in stainless steel)
